

Versatile controller with powerful PLC functionality,
extensible with hardware modules

ENA Control

- **1...4 channel fixed-value, ratio, override and cascade controller**
 - with P, PI, PD or PID characteristic
- **Dead time algorithm (Smith predictor)**
- **Spray-water protected front panel IP 65**
- **Clearly laid-out LC display with color change red/green**
- **Basic unit with 2 analog inputs, 1 analog output, 2 binary inputs/outputs and 2 relays**
- **Universal input for temperature sensor**
- **Filtering, linearization and square-rooting of the input signal**
- **Ramp rate for set point and output signal**
- **Programmer and program controller**
- **High and low limitation for set point and output signal**
- **Preconfigured input signal connection**
- **Analog or switching controller output**
- **Self-setting of parameters and parameter control**
- **Access bar for 'Parameter setting' and 'Configuration' by means of password or digital input**
- **Additional plug-in modules**
 - for analog and digital inputs and outputs
- **Custom configuration with function block diagram or instruction list**
- **Serial interface**
 - for parameter setting and configuration as standard
- **Buscapable RS 485 interface**
 - for Modbus or PROFIBUS for connection to higher-level systems, optional
- **Rapid lateral data exchange (187.5 kBaud)**
 - between up to 6 controllers via the interface module
- **Data storage in Flash-EPROM**

Intelligent,
compact and efficient

Description

The industrial controller D700 is a 1...4 channel compact controller used for complementing single control loops and for automating small and medium-sized processes in control engineering. It is universally applicable and suitable for accomplishing simple and complex control tasks.

Basic version

1 Universal input for the controlled variable. Without having to modify the hardware, thermocouples, the resistance thermometer Pt100, teletransmitters and standard signals 0/4...20 mA can be connected. If non-linearized temperature transmitters are used, linearization is effected in the controller. Linearization tables for all standard sensors are stored in the device.

1 input for mA and teletransmitter. It can be used as a transmitter for disturbance variable or set point input. In step controllers this input can be used for position feedback signalling.

1 mA output for the actuating signal or other values, e.g. for set point or actual values.

2 binary inputs/outputs. These inputs and outputs can be configured by the user. These can thus not only be used optionally as controller or alarm outputs but also as inputs for switching over the controller (e.g. manual/automatic).

2 relays for the actuating signal or alarm outputs and for fault reporting.

...a rear TTL interface to connect a parameterisation and configuration PC. This makes the setting work in connection with commissioning easier.

Hardware extension

4 module slots for extending the input and output levels.

Front control panel

The front control panel gives information on the state of the process and permits specifically-targeted intervention in the process sequence. Digital displays and clear-text information permit precise reading and accurate setting of set point and correction values.

Programmer

Every unit has a configurable programmer which provides a time-dependent set point. Up to 10 programs with 15 segments each can be stored in the unit.

Controller outputs (adjustable acc. to configuration list)

Two-position controller, PID characteristic without or with leading contact for high/low/off levelling.

Controller for heating/off/cooling, optionally with two switching or one continuous and one switching output.

Step controller for motorised valve control.

Continuous controller, optionally also split-range output with two continuous positioning signals.

Parameter setting

After entering a password, the user accesses the parameter setting level by means of a menu key. At the parameter setting level parameters for the available functions, such as controller gain K_p or time constants, can be set.

Configuration can be effected in two ways:

List configuration

The menu key accesses the password-protected configuration level. There the standard functions are selected from a list provided in the unit. As an alternative to the user keyboard, the selection can also be made by way of the PC program **IBIS-R**.

This especially simplifies the setting procedure if several units are to be set at the same time (see Data Sheet ENA62-6.70 EN).

Free configuration

Appr. prepared models allow for customer-specific configuration, i.e. functions beyond the standard functions of the controller.

The PC program **IBIS_R** enables a graphical programming with function block diagrams for realising any special calculation or PLC functions.

Retrofitting the plug-in Confi-IC allows subsequent free configurability.

Inputs

Common data:

without electrical isolation
Resolution $\leq 0.01\%$
Accuracy (referred to nominal range) $\leq 0.2\%$
Temperature effects $\leq 0.2\%/10\text{ }^\circ\text{C}$
Hardware input filter limit frequency 7 Hz

Permissible common-mode voltage against device ground

$\leq \pm 4\text{ V DC}$

Permissible differential-mode voltage $U_{ss}(50\text{ Hz})$: 50 mV

Analog:

Universal input AI01

used for standard signal

0/4...20 mA at $50\ \Omega \pm 1\%$

Overcurrent/polarity reversal protection

to $\pm 40\text{ mA}$

Linearization, square-rooting

configurable

at 4...20 mA

Line break monitoring with configurable reaction

used for thermocouples

Types	Temperature range	Voltage range	Typical accuracy
J	-200...1200 °C	77.43 mV	$\leq 0.2\%$
E	-200...1000 °C	85.18 mV	$\leq 0.2\%$
K	-200...1400 °C	61.53 mV	$\leq 0.2\%$
L	-200...1000 °C	78.21 mV	$\leq 0.2\%$
U	-200... 600 °C	40.00 mV	$\leq 0.3\%$
R	0...1700 °C	20.22 mV	$\leq 0.5\%$
S	0...1800 °C	18.72 mV	$\leq 0.5\%$
T	-200... 400 °C	26.47 mV	$\leq 0.4\%$
B	0...1800 °C	13.24 mV	$\leq 0.6\%$
D	0...2300 °C	36.92 mV	$\leq 0.4\%$

Technical data

Reference junction compensation

internal or external: 0, 20, 50 or 60 °C

Internal reference junction

Error limit ± 1 °C/10 K
 Reference temperature 22 °C ± 1 °C
 Ambient temperature 0...50 °C

Sensor break monitoring

with configurable reaction

Used for resistance thermometer Pt100 DIN

Measuring range

-200.0...+200.0 °C
 -200.0...+800.0 °C

Measuring current

≤ 1 mA

Measuring circuit: 2-wire circuit to 40 Ω line resistance
 Line balancing: by software

3-wire circuit: for symmetrical lines up to 3 x 10 Ω

4-wire circuit: sensor short-circuit and break monitoring
 with configurable reaction

used for resistance teletransmitter (potentiometer)

Measuring ranges

150 Ω , (75...200 Ω); 1.5 k Ω (0.75...2 k Ω)

Measuring current: ≤ 1 mA

other data as resistance thermometer

Analog input 2 (AI02)

Input for mA signals and teletransmitter, technical data as AI01, but without electrical isolation. 0...10 V as option (see Code No. 310).

binary:

2 binary inputs/outputs (B01/B02)

Direct/reverse function configurable

Input DIN 19240	Rated signal V DC	Voltage range (V)	Current range
Rated level	24	20.4...28.8	approx. 1 mA
1-signal	24	13.0...30.2	approx. 1 mA
0-signal	0	- 3.0... 5.0	< 0.2 mA

Output DIN 19240	Rated signal V DC	Voltage range (V)	Current range
Rated level	24 ext.	20.4...28.8	100 mA
1-signal	24	13.0...30.2	0...max. mA
0-signal	0	- 3.0... 5.0	0...0.15 mA

Switching frequency ≤ 8 Hz

Outputs

Analog:

Control output or retransmission

0/4...20 mA at max. 750 Ω , short-circuit and open-circuit proof

Control range

0... ≥ 21 mA

Load-dependency

0.1 %/100 Ω

Resolution: ≥ 0.01 %

binary: see inputs

2 relays with NO contact (B03/B04)

for max. 250 V AC, 1 A $\cos\phi = 0.9$
 for min. ≥ 12 V AC, ≥ 100 mA
 built-in spark quenching feature 0.022 μ F + 100 Ω
 Contact material AgCdO

Transmitter feed

Output voltage: 20...24 V DC, 100 mA, short-circuit proof

Load monitoring

Output automatically cuts off on overload

Programmer

10 programs can be stored

each program:
 15 segments
 Set point in physical units
 Segment time 0...99:99:9 hours, four digital tracks

Serial interfaces

TTL interface for coupling to PC to match parameter setting and configuration program IBIS-R (see Data Sheet ENA62-6.70 EN).

For adapter cable see ordering information.

Buscapable RS 485 interface retrofittable (see modules)

CPU data

Measured value and correction value resolution

≤ 0.01 %

Cycle time

≥ 20 ms (master setting without modules)

Data backup

Flash-EPROM

Power supply

115 to 230 V AC (90...260 V), 47...63 Hz

Power consumption:

D700 without modules 9 VA (6 W)
 Max. component mounting + 7.4 VA (5 W)
 Power failure bridging ≥ 150 ms at ≥ 180 V AC

24 V UC

24 V DC -25...+30 %, residual ripple $\leq \pm 3$ V_{SS}
 -15...+10 %, 47...63 Hz
 24 V AC
 Power consumption:
 D700 without modules 10 VA (7 W)
 Max. component mounting + 8.2 VA (5.5 W)
 Power failure bridging ≥ 20 ms at $0.85 \times U_{nom}$

Power factor $\cos\phi = 0.7$

Safety

The device needs no external safety of power supply

Environmental conditions

Climatic class

3K3 to EN 60721-3-3

Ambient temperature

0...50 °C

Storage and transport temperature

-20...+70 °C

Relative humidity

< 85 %, short-term to 95 %, no condensation

Electromagnetic compatibility

Meets protection requirements of EMC directive 89/336/EEC, 5/89

Interference resistance EN 61326, May 2004

Interference emission EN 50061000-6-3, June 2005
(referred to: EN 55011, August 2003, class B)

Industry standard to NAMUR NE 21, February 2004

Connection, case, safety**Degree of protection to DIN EN 60529**

Front panel: IP 65

Case: IP 30

Terminals: IP 20

Electrical safety

Meets requirements to EN 61010 -1 (VDE 0411, part1, August 2002)

Class of protection 1

Clearances and creepage distances as per EN for overvoltage category 3, degree of contamination 2

All inputs and outputs, including the interface and the transmitter feed but excepting all relay outputs are functional extra-low voltage circuits to DIN VDE 0100, part 410.

Mechanical stress features

to EN 60068-2-27, March 1995 and EN 60068-2-6, May 1996

Shock 30 g/18 ms; Vibration 2 g/0.15 mm/5...150 Hz

Case dimensions

Front panel 96 mm x 96 mm

Installed depth 200 mm

Panel cutout

92 mm x 92 mm to DIN IEC 61554

Mounting

in panel

Horizontal high-density construction possible

Vertical spacing 36 mm

Fixing with straining screws at top and bottom

Electrical connections**Plug-in screw terminals**for wire or stranded wire to 1.5 mm², coded**Power supply**2.5 mm²

No shielded cables required - except for interface leads

Mounting orientation

any

Weight

approx. 800 g without modules

each module approx. 40 g

each relay module approx. 80 g

Scope of supply and delivery

Controller including mounting material and Operating Manual

Modules

With few exceptions, the modules can be run at all slots (see table page 10).

The controllers identify the inserted modules automatically.

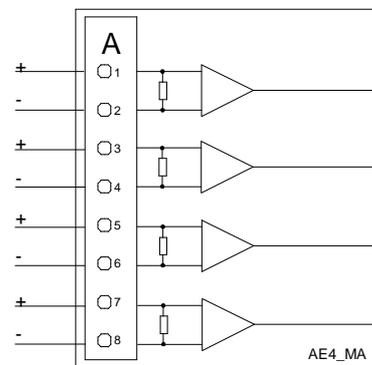

Analog inputs**Module AE4_MA for standard signals****4 inputs**

0/4...20 mA with electrical isolation

Input resistance: approx. 50 Ω**Signal resolution:** ≤ 0.01 % for 20 mA**Permissible common-mode voltage:** ≤ ± 4 V against device ground**Permissible differential-mode voltage:** 50 mV_{SS}**Destruction proof**

Input current < 50 mA

Voltage between input and ground ± 50 V

**Module AE4_MA-MUS**for mA or V signals, integrated transmitter feed
(pay attention to maximum power consumption, page 10)**4 inputs**

0/4...20 mA, indiv. switchable to 0/2...10 V with common ground

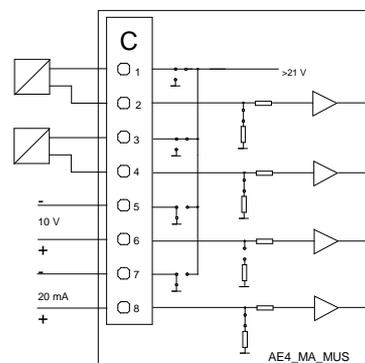

Input resistance at

mA input: approx. 50 Ω; 10 V input: 200 kΩ

Transmitter feed: 20 V, 82 mA

Other data as module 4_MA

Example of an input configuration

Module 4_MV for thermocouples

4 inputs

-10...80 mV, with electrical isolation

Signal resolution: 20.000 for -10...80 mV

Input resistance: approx. 5 MΩ

Permissible common-mode voltage: ≤ ± 4 V against device ground

Permissible differential-mode voltage: 50 mV_{ss}

Destruction proof

Voltage at one input ± 10 V

Voltage between input and ground ± 50 V

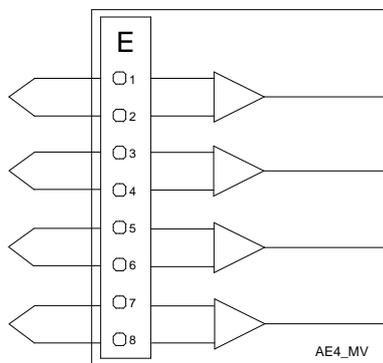

Break monitoring

configurable reaction

Reference junction compensation

configurable, internal or external 0, 20, 50 or 60 °C

Linearization configurable like AI01

Module AE2_MA/MV-TR

for mA signals or thermocouple with electrical isolation

2 inputs with electrical isolation

0/4...20 mA or -10...80 mV (changeable by means of jumpers)

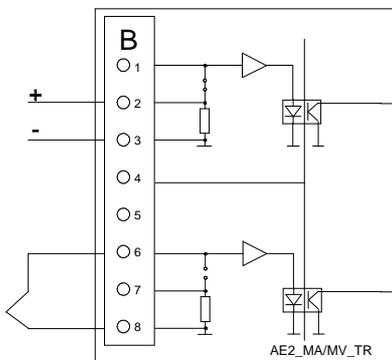

Input resistance at

20 mA: 25 Ω; -10...80 mV: approx. 5 MΩ

Dielectric strength of input and output leads against each other and against grounded conductor:

Test voltage 500 V AC
 Continuous operation 45 V AC

Technical data as modules 4_MV or 4_MA

Module AE4_PT_2L for RTD 2-wires

4 inputs: for Pt100 in 2-wire circuit

Range: 0...400 Ω

Permissible differential mode voltage: 100 mV_{ss}

Signal resolution: ≤ 0.01 % for 400 Ω

Measuring current: ≤ 1.5 mA

Measuring range configurable

-200.0...+200.0 °C

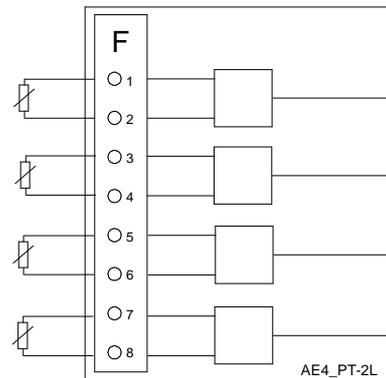

0.0...+450.0 °C

-200.0...+800.0 °C

Line balancing by software

Sensor break and short-circuit monitoring

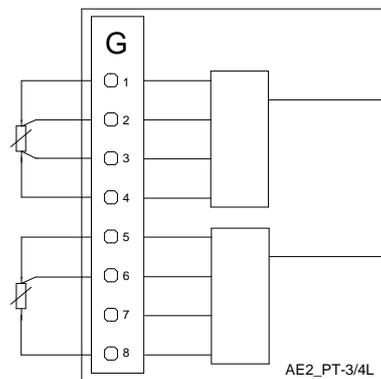

configurable reaction

Module AE2_PT-3/4L for RTD 3-/4-wires

2 inputs

for Pt100 in 3- or 4-wire circuit or potentiometer

Technical data for Pt100 as module AE4_PT_2_L

Potentiometer R150: 0...150 Ω

Series resistance: 0...500 Ω

Measuring current < 1.5 mA

Potentiometer R1500: 0...1500 Ω

Series resistance: 0...1500 Ω

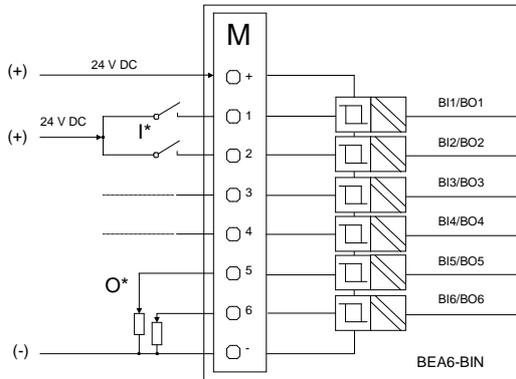

Measuring current < 0.5 mA

Binary inputs/outputs

Module BEA6-BIN

6 binary inputs/outputs, electrical isolation

Function configurable as input or output, direct or reverse action

*) Connection example: I = binary inputs; O = binary outputs

Input DIN 19240	Rated signal V DC	Voltage range (V)	Current range
Rated level	24	20.4...28.8	approx. 3 mA
1-signal	24	13.0...30.2	approx. 3 mA
0-signal	0	-3.0...5.0	≤ 0.1 mA

Output DIN 19240	Rated signal V DC	Voltage range (V)	Current range
Rated level	24 ext	20.4...28.8	100 mA
1-Signal	24	13.0...30.2	0...max. mA
0-Signal	0	-3.0...5.0	0...0.1 mA

Real time clock

Module BEA4_RTC

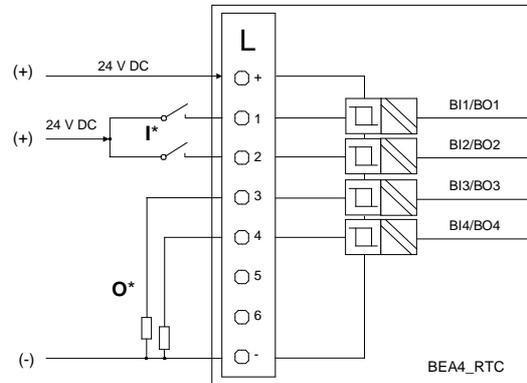

Real time clock with date, weekday and time

Daylight saving time and leap year switching

Synchronisation by digital input

Battery buffer or capacitor buffer (> 72 h)

4 digital I/O, electrical isolated, function configurable as inputs or outputs (technical data see Module BEA6_BIN)

*) Connection example: I = binary inputs; O = binary outputs

Module BA4_REL

(only usable at slot 1)

4 relays

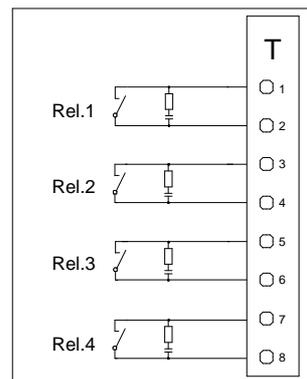

with NO contact for max. 250 V AC, 1 A resistive load

Built-in spark-quenching

0.022 μF + 100 Ω

For max. 250 V, max. 1 A at cosφ = 0.9

Contact material AgCdO

BA4_REL

Module AE4_F

4 inputs for:

Frequency (1/4 inputs)

Range 1 input	0...20 kHz
Range 4 inputs	0...10 kHz
Signal resolution	1 Hz

Periode (1-4 inputs)

Range	0...20 s
Signal resolution	1 ms

Impulses (1-4 inputs)/incremental angle (2 inputs)

Range: 0...20.000 impulses	
min. impulse length: 50 µs	max. 1kHz

Absolute incremental angle (1 input)

Range: 0...20.000 impulses	
min. impulse length: 50 µs	max. 1kHz

Types of input signals:

Max. 2 Namur inputs according to DIN 19234

Open circuit voltage	$U_i = 9.5 V$
Internal resistance	$R_i = 1 k\Omega$
Signal range	$L = 0...1.2 mA/H = 2.1...4.0 mA$

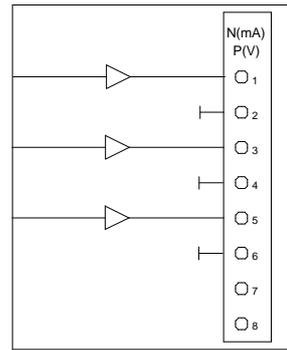

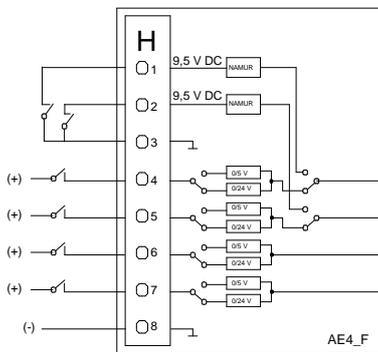

Max. 4 digital inputs according to DIN 19240 (0/24 V DC)

Input resistance	$R_E > 6 k\Omega$
Signal range	$L = -3...5 V/H = 13...20.2 V$

Max. 4 digital inputs TTL (0/5 V DC)

Input resistance	$R_E > 6 k\Omega$
Signal range	$L = 0...0.8 V/H = 3.5...24 V$

Accuracy: ± 0.1 %

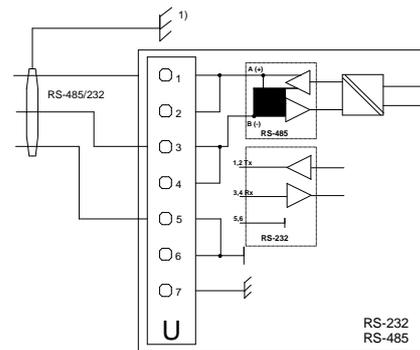

AA3-V
AA3_MA

Interface modules

Module RS 485 or RS 232

(can only be used in slot 4)

Interface module in accordance with RS 485 or RS 232 specification. Electrically isolated. Not dependent on protocol (the protocol used is configured in the controller. Standard protocol: MODBUS-RTU. The RS 485 module also allows rapid, direct data exchange for lateral communication between up to 6 devices. Thus it is possible to expand the basis for inputs/outputs and also realise redundancy with to controllers in simple fashion. Transmission rate up to 187.5 kBaud.

RS-232
RS-485

Module PROFIBUS DP/DPV1 (Slave)

Can be used in all slots 1...4. Module with the full functional capabilities of DIN 19245, parts 1 to 4. Maximum 1 module can be used in the device. Transmission rate up to 1.5 MBaud. Bus terminating adapter see accessories on page 10

Analog outputs

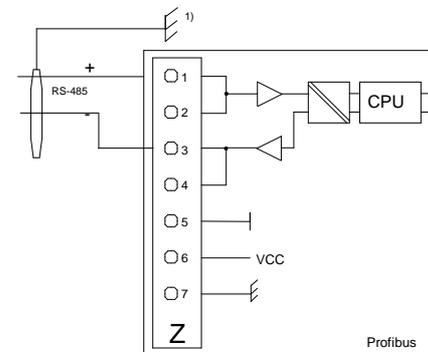

Module AA3_MA

(pay attention to maximum power consumption, page 10)

- Triple current output 0/4...20 mA at 750 Ω
- Signal resolution ≤ 0.02 % for 20 mA
- Load dependency 0.1 %/100 Ω
- Output monitoring, reaction configurable

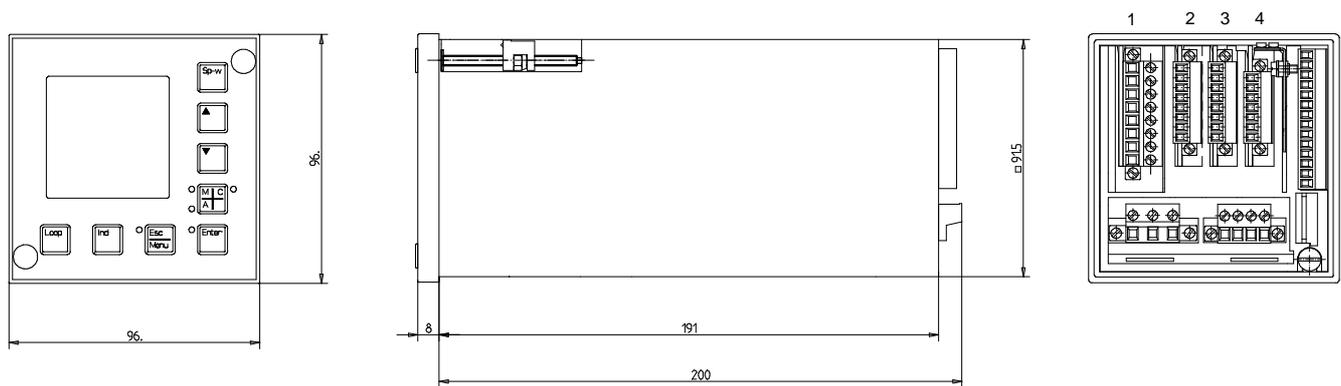

Module AA3_V

Triple voltage output 0/2...10 V ≥ 5 kΩ

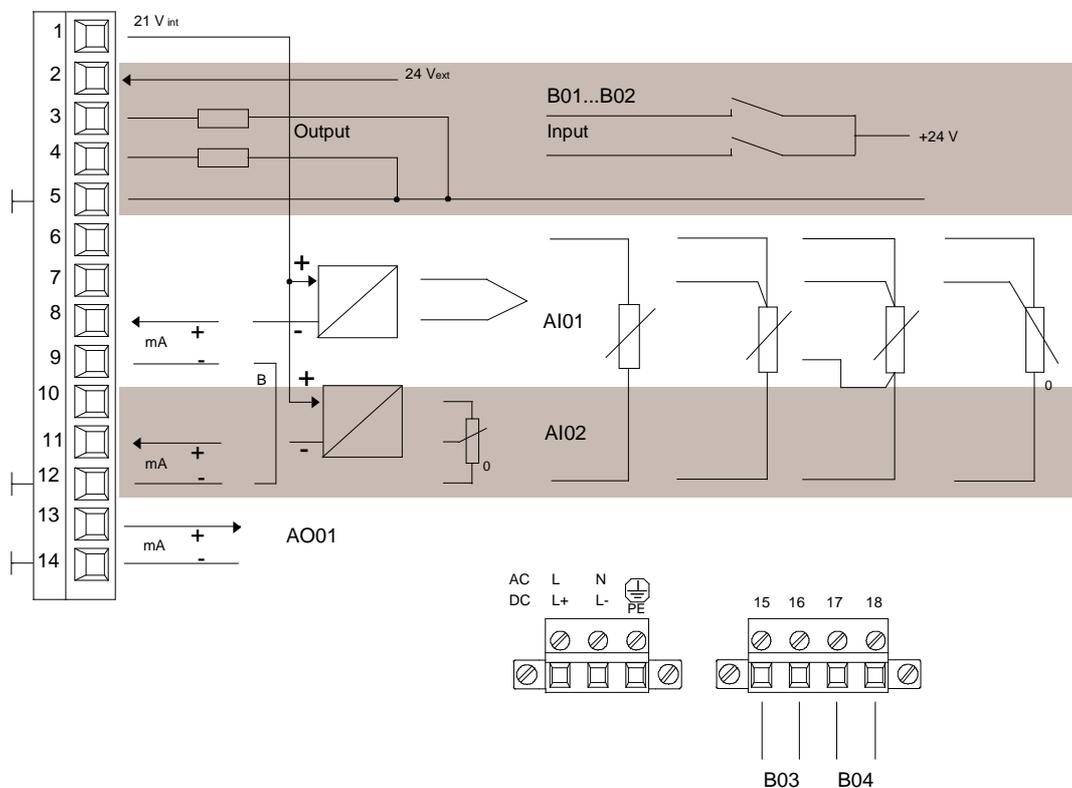

Profibus

Dimensional drawings

Connection diagrams of basic models

Connection diagram

- AI01 Universal input
- AI02 Additional current input (0/4...20 mA) and teletransmitter
- B01...B02 Binary inputs or outputs, Function configurable
- AO01 Analog output 1 (0/4...20 mA)
- 21 V Feed for 2-wire transmitter and/or binary inputs and outputs
- B Jumper required only if power feed to transmitter from terminal 1 and connection to AI01
- B03...B04 Relay outputs (NO contact) max. 250 V AC/1 A
